MECHANISM ASSY

## CASSETTE MECHANISM

### NOTE:

- This service manual describes the operation of the cassette mechanism incorporated in the models listed below.
- When performing repairs, use this manual together with the specific manual for the model under repair.

## CASSETTE MECHANISM

- (8) The Selector Gear ④④ rotates by 180 degrees, and locks with the Gear Lock Arm ④⑦.
- (9) By a half rotation (180 degrees) of the Selector Gear ④④, the Conversion Lever ②④ and the FR Changing Arm Assy ④ move.
- (10) The Pinch Arms (F) Assy (PS) and (R) Assy (PS) (①④ and ①③) and the Slide Switch(SW3) ①⑩ are switched by the FR Changing Arm Assy ④. At the same time, the Head(HD1) ⑨⑧ is moved upward and downward by the linked Adjuster Link (X) ④⑥. The TU Gear Arm Assy ④⑨ is switched by the FR Arm (A) Assy ①⑩ and FF Arm ④② to change the direction (FWD and REV).

### FWD operation

Fig. 5-1

### REV operation

Fig. 5-2

## 4.2 MANUAL PROGRAM OPERATION

- (1) Pressing the FF and REW Lever (AT) (30 and 31) simultaneously moves the Program Arm (A) in the direction shown by the arrow, by the pressure of the Program Arm Spring (71). (Fig.6)
- (2) The Program Arm (A) is then moved further by the guiding hole of the lever.
- (3) The movement of the Program Arm (A) is conveyed to the Change Lever (B) (28), Selector Link (B) (86), Ratchet (41) and then Gear Lock Arm (47).
- (4) The Gear Lock Arm (47) is unlocked. The Dash Spring (77) causes the Selector Gear (44) to rush and engage with the Detector Gear (48). The Selector Gear (44) rotates.
- (5) The projecting portion of the cam of the Selector Gear (44) taps the Ratchet (41). The Gear Lock Arm (47) is released from the Ratchet (41), returns to the given position, and locks the Selector Gear (44).
- (6) Due to the Lock of the Gear Lock Arm (47), the Selector Gear (44) rotates by 180 degrees and stops.
- (7) By a half rotation (180 degrees) of the Selector Gear (44), the Conversion Lever (24) and the FR Changing Arm Assy (4) moves.
- (8) The Pinch Arm (F) Assy (PS) and (R) Assy (PS) (14 and 13) and the Slide Switch (SW3) (100) are switched by the FR Changing Arm Assy (4). At the same time, the Head (HD1) (98) is moved upward and downward by the linked Adjuster Link (X) (46). The TU Gear Arm Assy (49) is switched by the FR Arm (A) Assy (10) and FF Arm (42) to change the direction of rotation (FWD and REV) of the Reel Spindle Assy (D) (15).

Fig. 6

# CASSETTE MECHANISM

## 4.3 AUTO REPLAY OPERATION

- (1) When the rotation of the Reel Spindle Assy (D) ⑮ stops, the detection mechanism operates. (For the operation of the detection mechanism, refer to 4.1 OPERATION OF THE DETECTION MECHANISM.)
- (2) After detection, the system operates in reverse. The FR Changing Arm Assy ④ moves and the linked Adjuster Link (X) ④⑥ taps the Lock Arm (A) ②⑦ to unlock the FF and REW Levers (AT) ③⑩ and ③⑪).
- (3) The FF and REW Levers (AT) ③⑩ and ③⑪ return to the given position by the pressure of the FF/REW Lever Spring ⑥④. Then the Head Plate Assy (S) ② is pushed out by the pressure of the Head Plate Spring ⑥⑨.

Fig. 7

## 4.4 CASSETTE INSERTION AND LOADING OPERATION

- (1) Inserting a cassette rotates the Center Plate Spring (B) ⑦⑧ in the reverse direction to activate pressure in the withdrawal direction.
- (2) The Tape Hooker ⑤② withdraws the cassette by the pressure of the Spring.
- (3) The Tape Hooker ⑤② taps the Eject Cam Lock Assy ⑥ to unlock the Eject Cam ②⑩. Then the Eject Cam ②⑩ moves in the direction shown by an arrow in the Fig.8.
- (4) The Eject Cam ②⑩ lowers the Cassette Hanger (X) ②②, and the Head Plate Assy (S) ② moves forward.
- (5) The tooth of the Cassette Hanger (X) ②② shifts the Power Switch(SW1) ⑨⑨ to ON.

Fig. 8

## 4.5 MUTE MECHANISM

- (1) Pressing the FF Lever (AT) ③① or REW Lever (AT) ③② (FF/REW operation) retracts the Head Plate Assy (S) ②.
- (2) When the Head Plate Assy (S) ② retracts, the Mute Arm (N) ⑤① presses the Mute Switch (SW2) ①② to shift it to ON.

Fig. 9

## 4.6 FF OPERATION (IN THE FWD DIRECTION)

- (1) When the FF Lever (AT) ③① is pressed, it locks with the Lock Arm (A) ②⑦.
- (2) The tilted portion of the FF Lever (AT) ③① retracts the Head Plate Assy (S) ②. When the Head Plate Assy (S) ② moves backward, the Pinch Arm (F) Assy (PS) ①④ moves away from the Flywheel Assy (BF) ①②.
- (3) Then, the Reel Spindle Assy (D) ①⑤ rewinds the tape (with the clutch mechanism inactivated).

Fig. 10

## CASSETTE MECHANISM

### 4.7 REW OPERATION (IN THE FWD DIRECTION)

- (1) When the REW Lever (AT) ③① is pressed, it locks with the Lock Arm (A) ②⑦.
- (2) The tilted portion of the REW Lever (AT) ③① retracts the Head Plate Assy (S) ②. When the Head Plate Assy (S) ② moves backward, the Pinch Arm (F) Assy (PS) ①④ moves away from the Flywheel Assy (BF) ①②.
- (3) The tooth of the REW Lever (AT) ③① presses the Change Lever (B) ②⑧. The Change Lever (B) ②⑧ links to the FR Arm (B) ②⑨, FF Arm ④②, and then TU Gear Arm Assy ④⑨.
- (4) The TU Gear Arm Assy ④⑨ moves toward the opposite side of the Reel Spindle Assy (D) ①⑤ for the playback and engages with the other Reel Spindle Assy (D) ①⑤ to rewind the tape.

Fig. 11

### 4.8 AMS OPERATION

- (1) The FF and REW Levers (AT) ③⑩ and ③① are locked by the Lock Arm (A) ②⑦.
- (2) The Release Arm ③② is pulled by the Plunger(SO1) ①④④.
- (3) The Release Arm ③② strikes the Lock Arm (A) ②⑦ to unlock it.
- (4) The FF and REW Levers (AT) ③⑩ and ③① are returned by the pressure of the FF/REW Lever Spring ⑥④, the Head Plate Assy (S) ② is pushed out, and the system plays back.

Fig. 12

## 4.9 EJ OPERATION (CASSETTE EJECTION)

- (1) Press the Eject Lever ②①. The Eject Lever ②① pushes the Eject Cam ②②. The cam (tilted portion) of the Eject Cam ②② retracts the Head Plate Assy (S) ②.
- (2) Then, the Head Plate Assy (S) ② pushes the Pinch Arm (F) Assy (PS) and (R) Assy (PS) (①④ and ①③) to retract them.
- (3) The Cassette Hanger (X) ②② is lifted by the projected portion of the Eject Cam ②②. The lifted Cassette Hanger (X) ②② shifts the Power Switch(SW1) ②⑨ to OFF. At the same time, the Return Link ②⑨ pushes the Center Plate ②⑥ to rotate the Center Plate Spring (B) ②⑧ in the reverse direction.
- (4) The pressure of the Center Plate Spring (B) ②⑧ causes the Tape Hooker ②⑤ to move toward the ejection direction. The Tape Hooker ②⑤ moves the Eject Cam Lock Assy ②⑥ to lock the Eject Cam ②②.
- (5) The cassette is ejected by the Tape Hooker ②⑤.

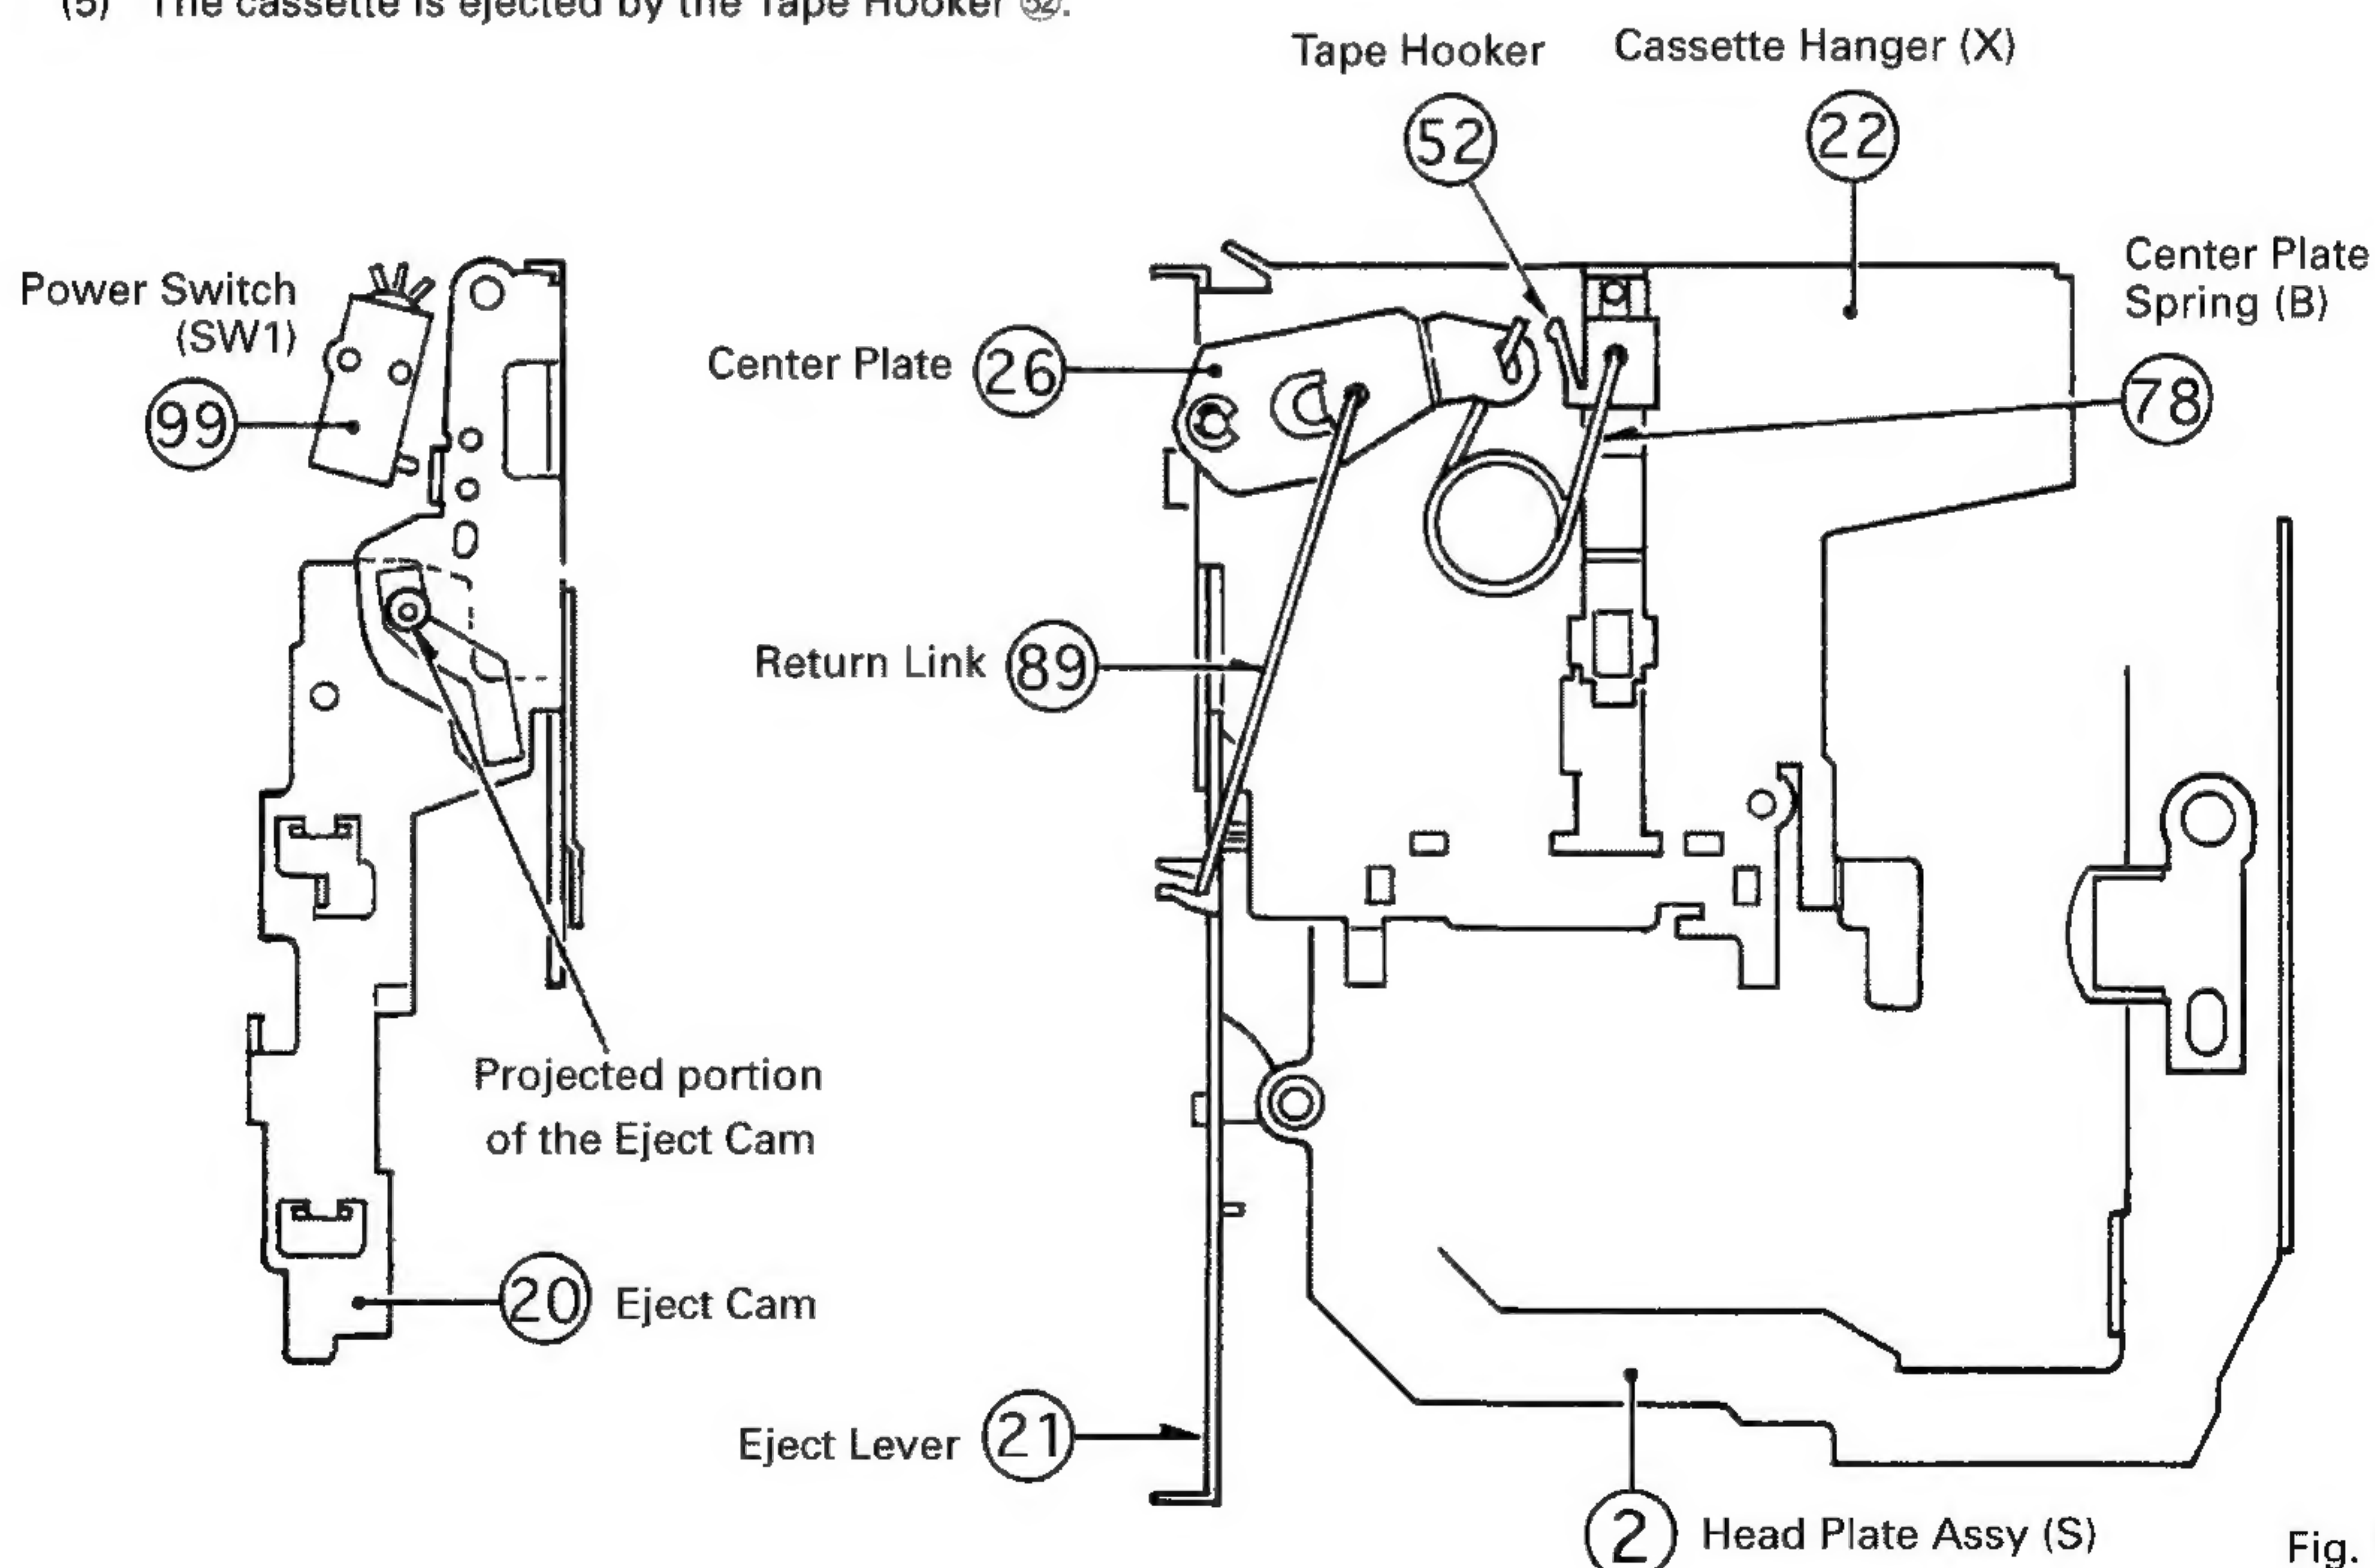

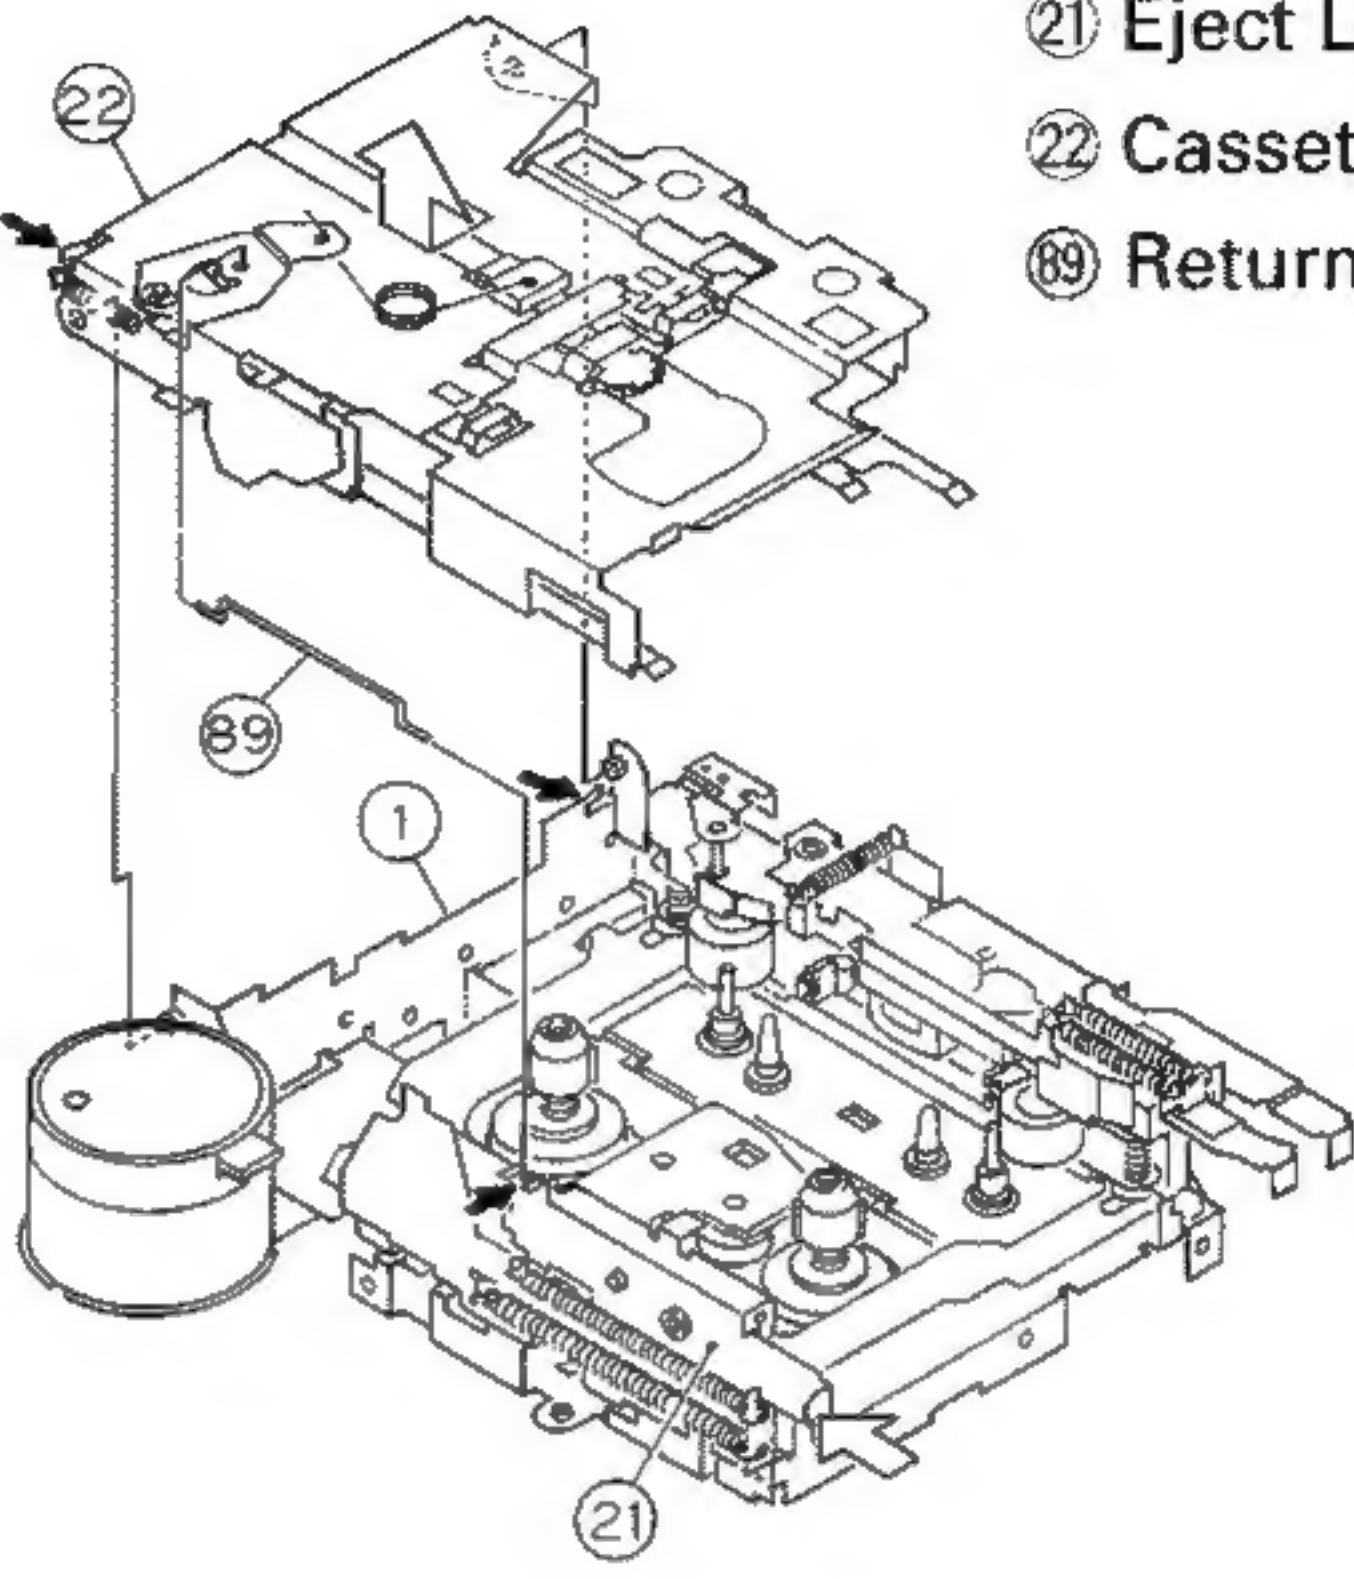

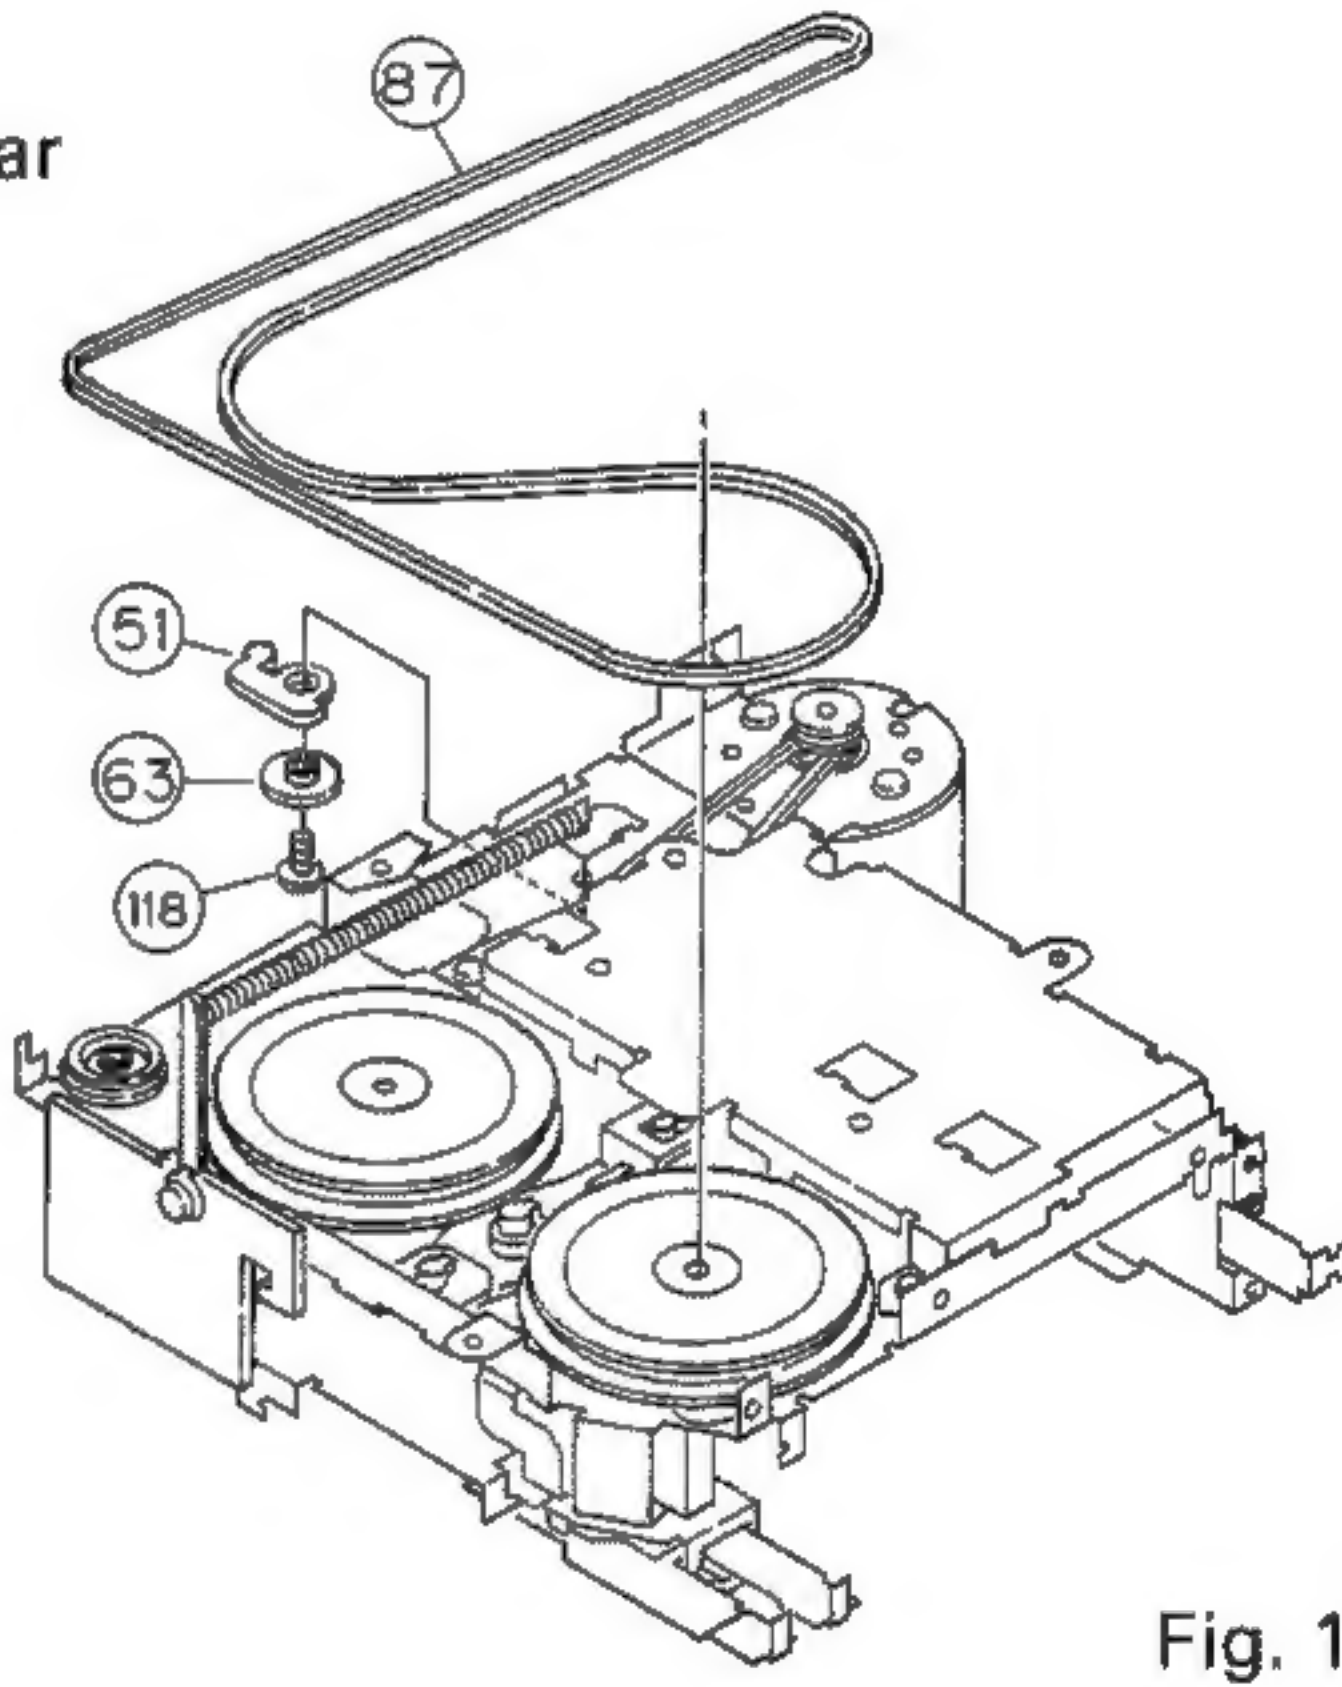

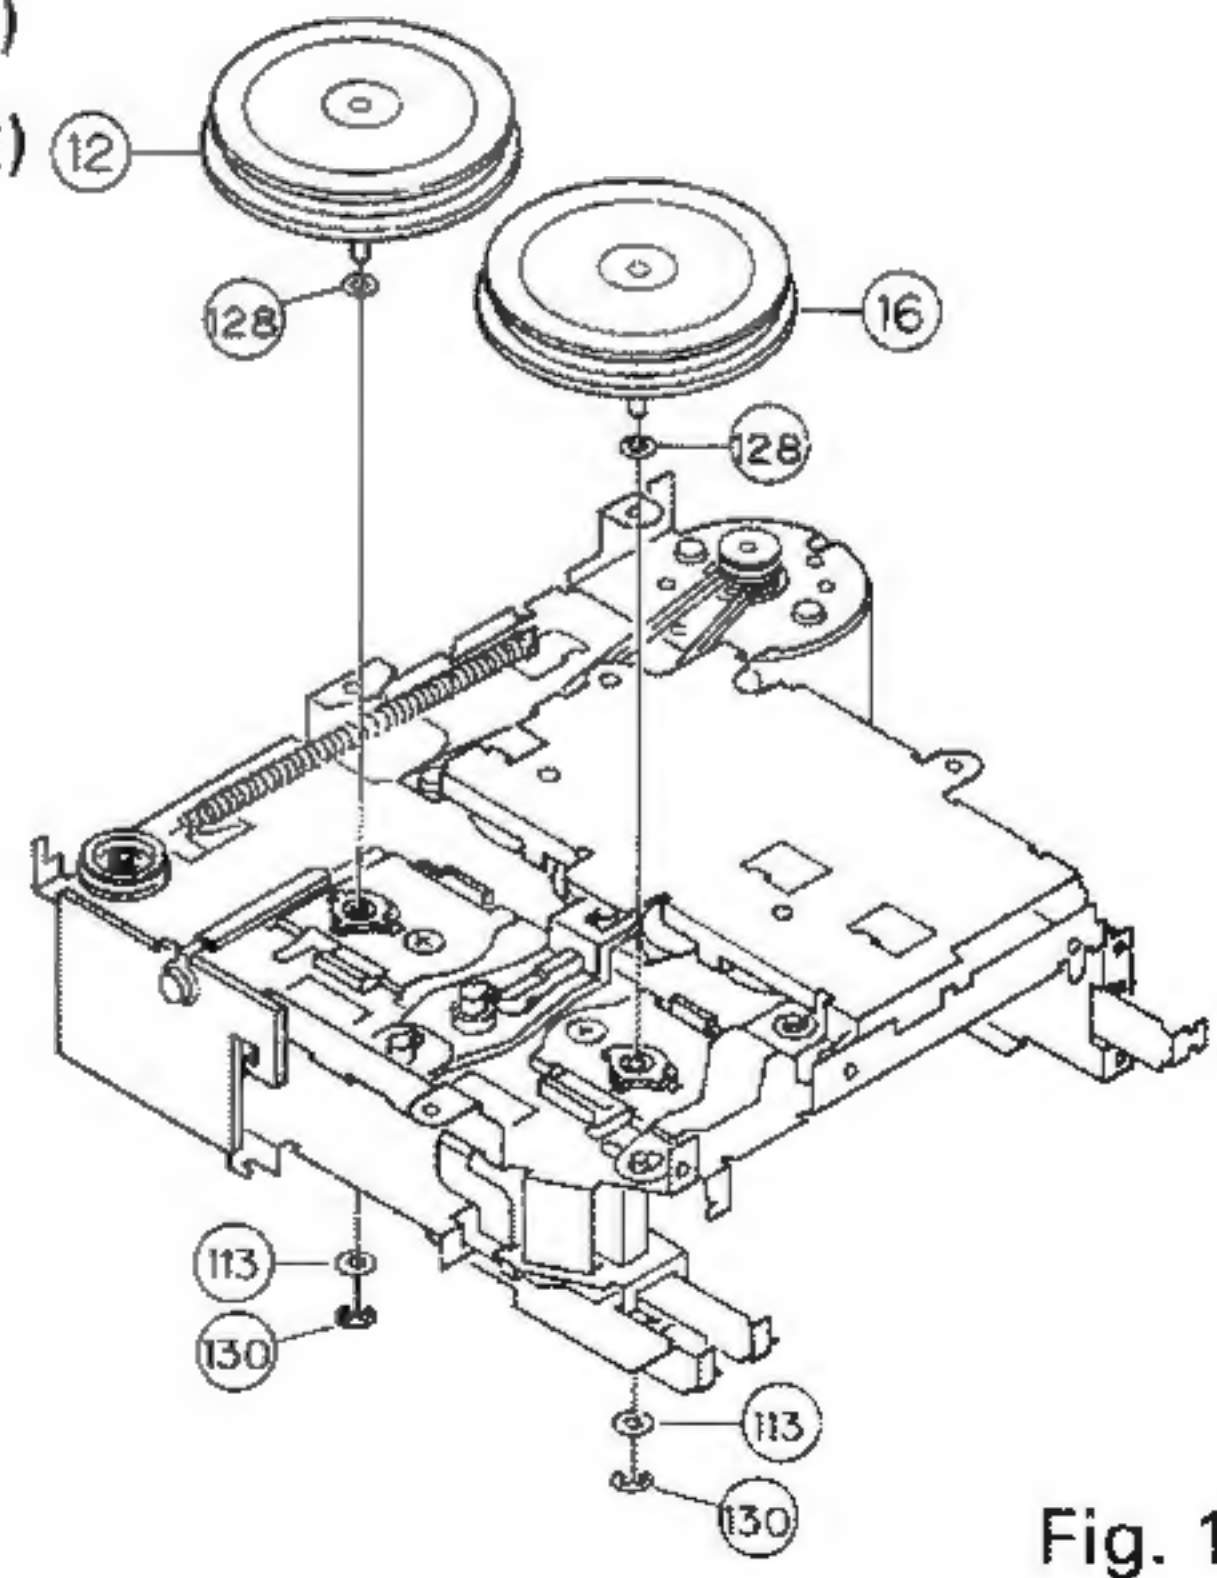

Fig. 13

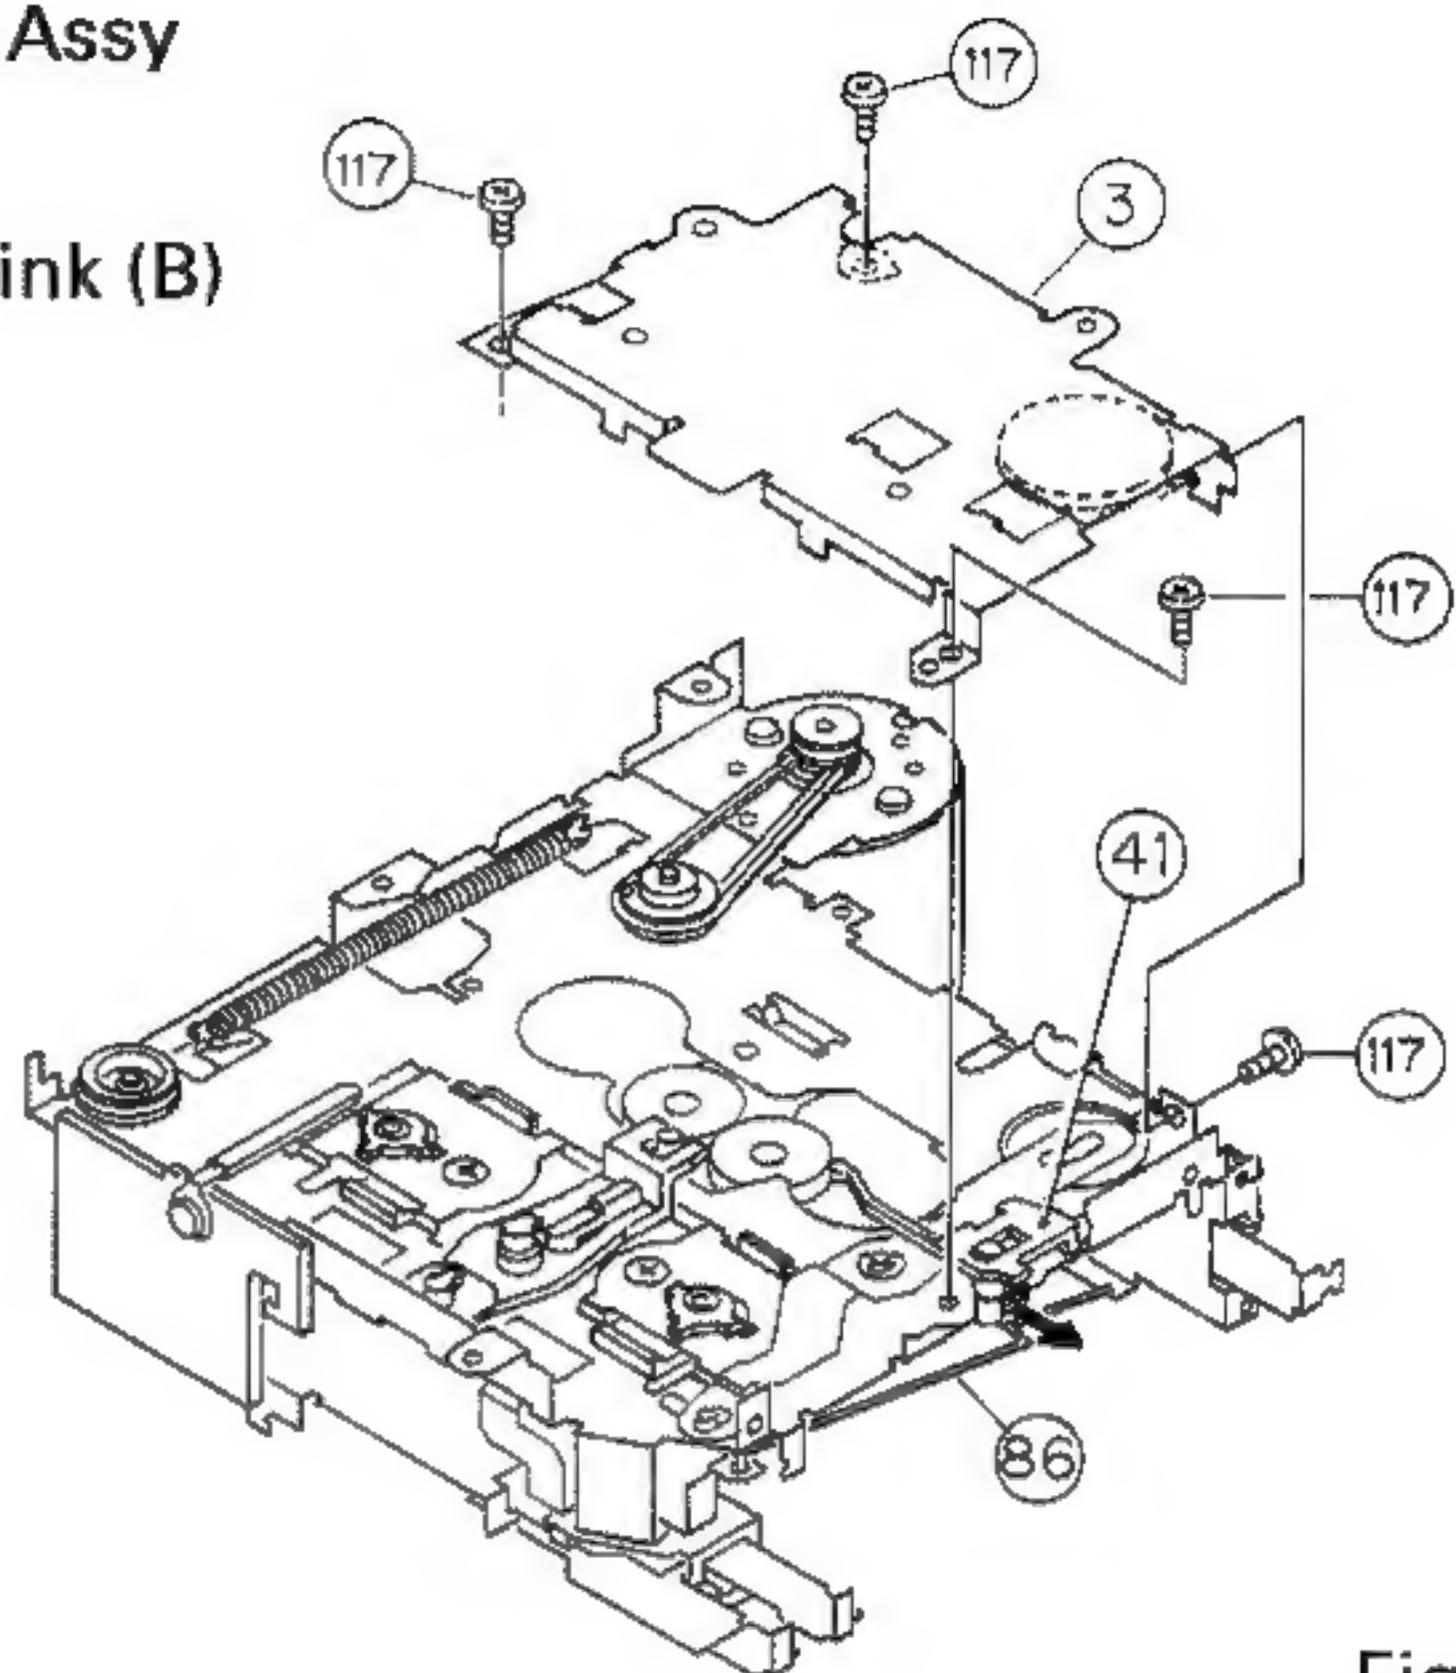

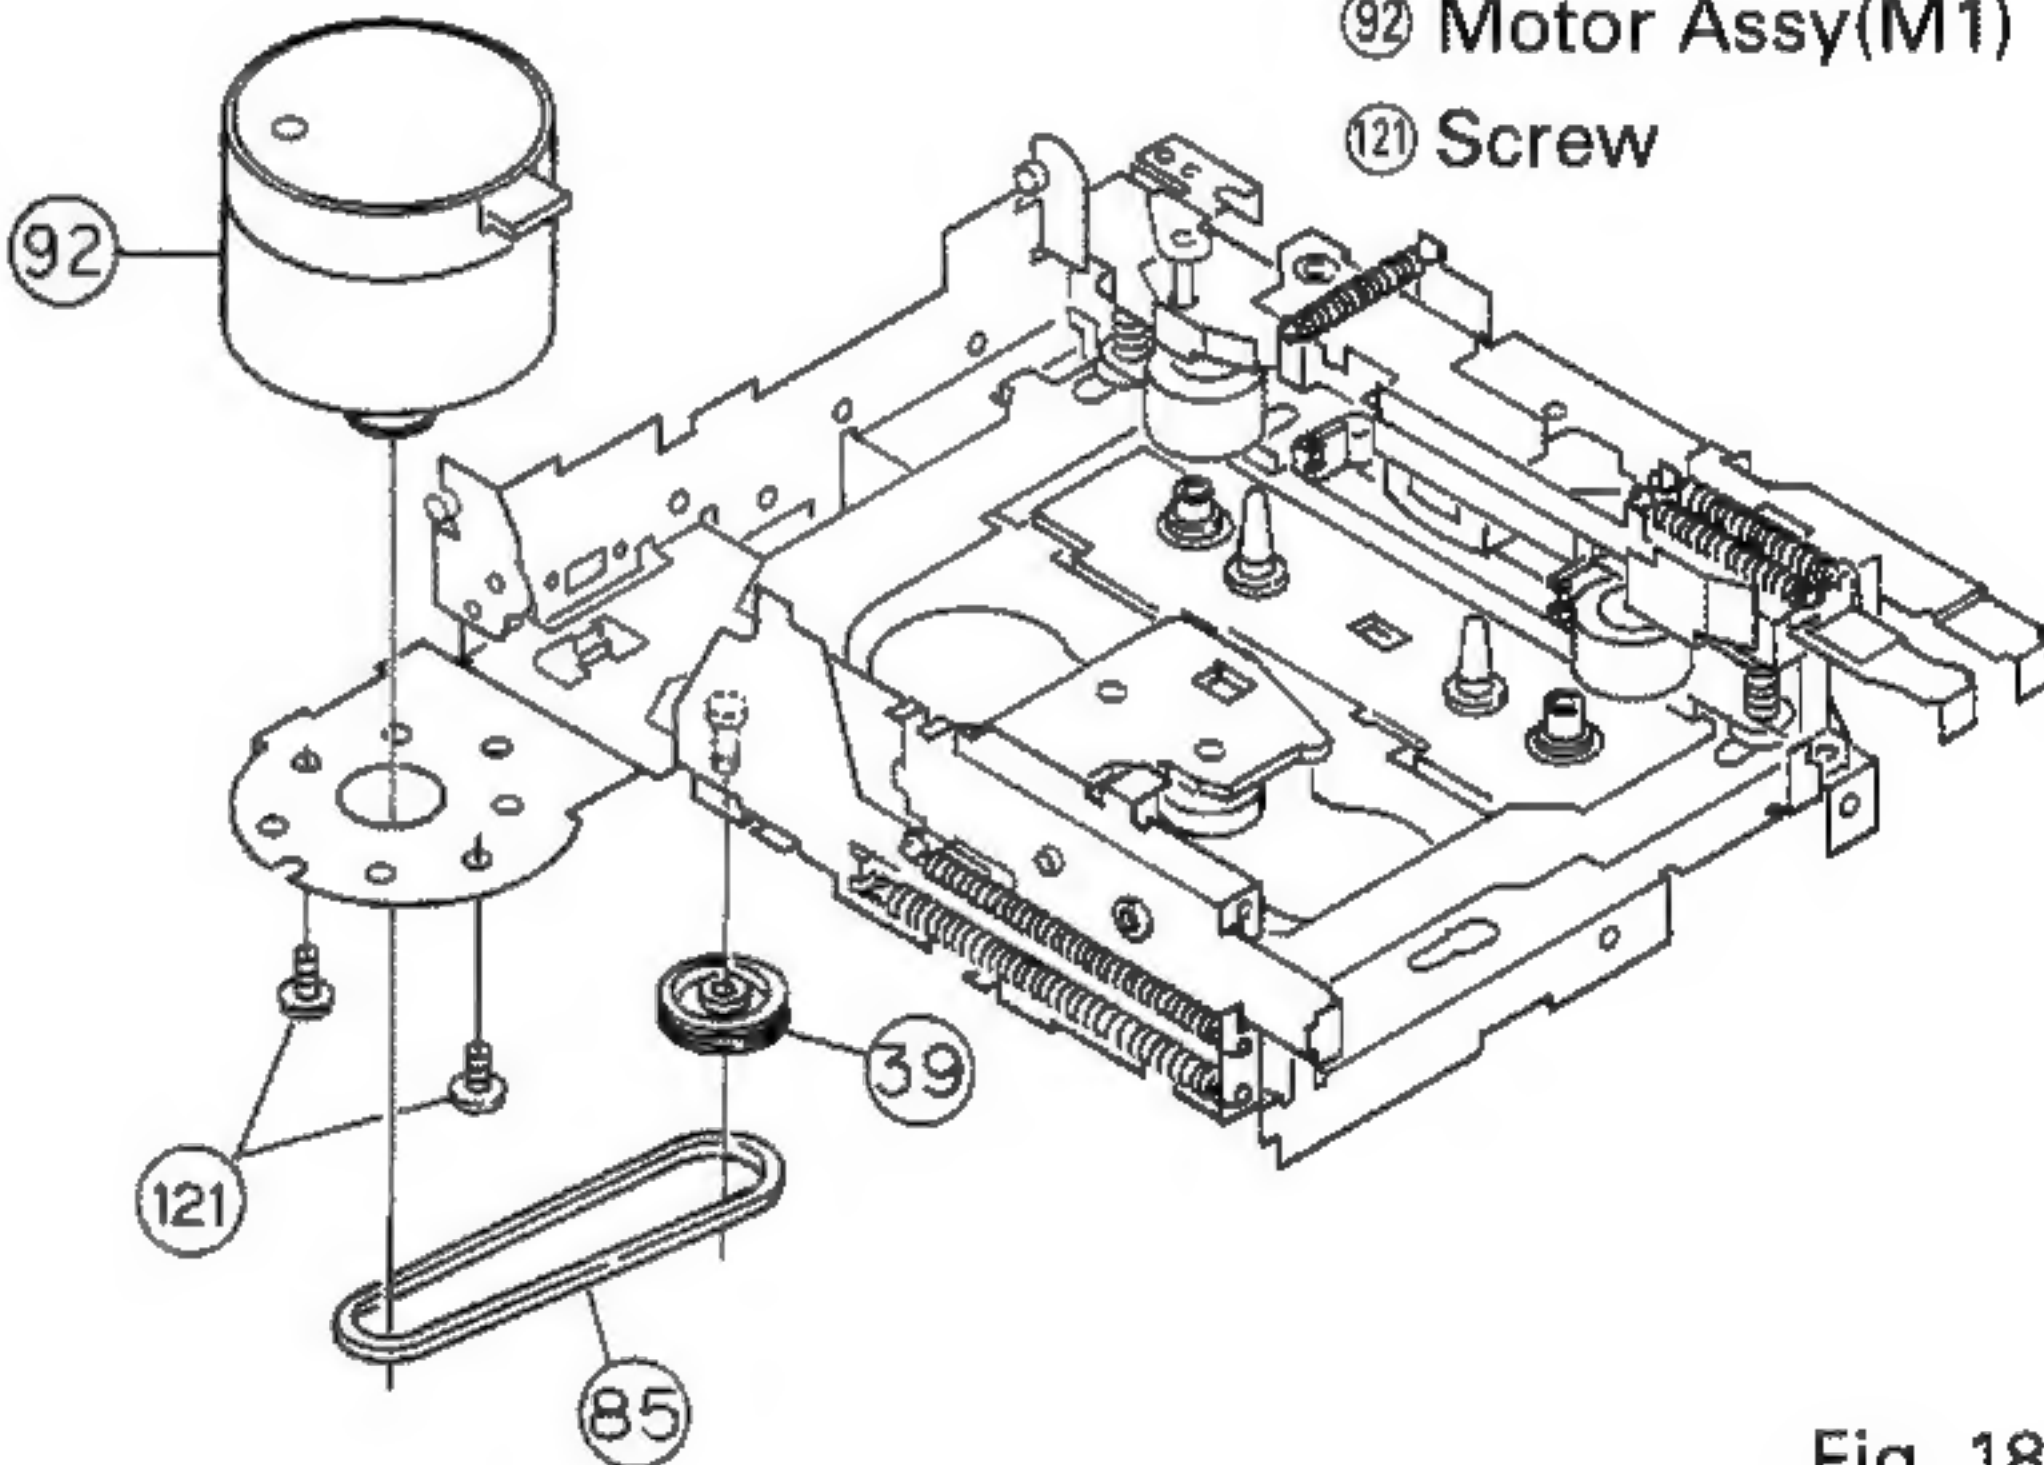

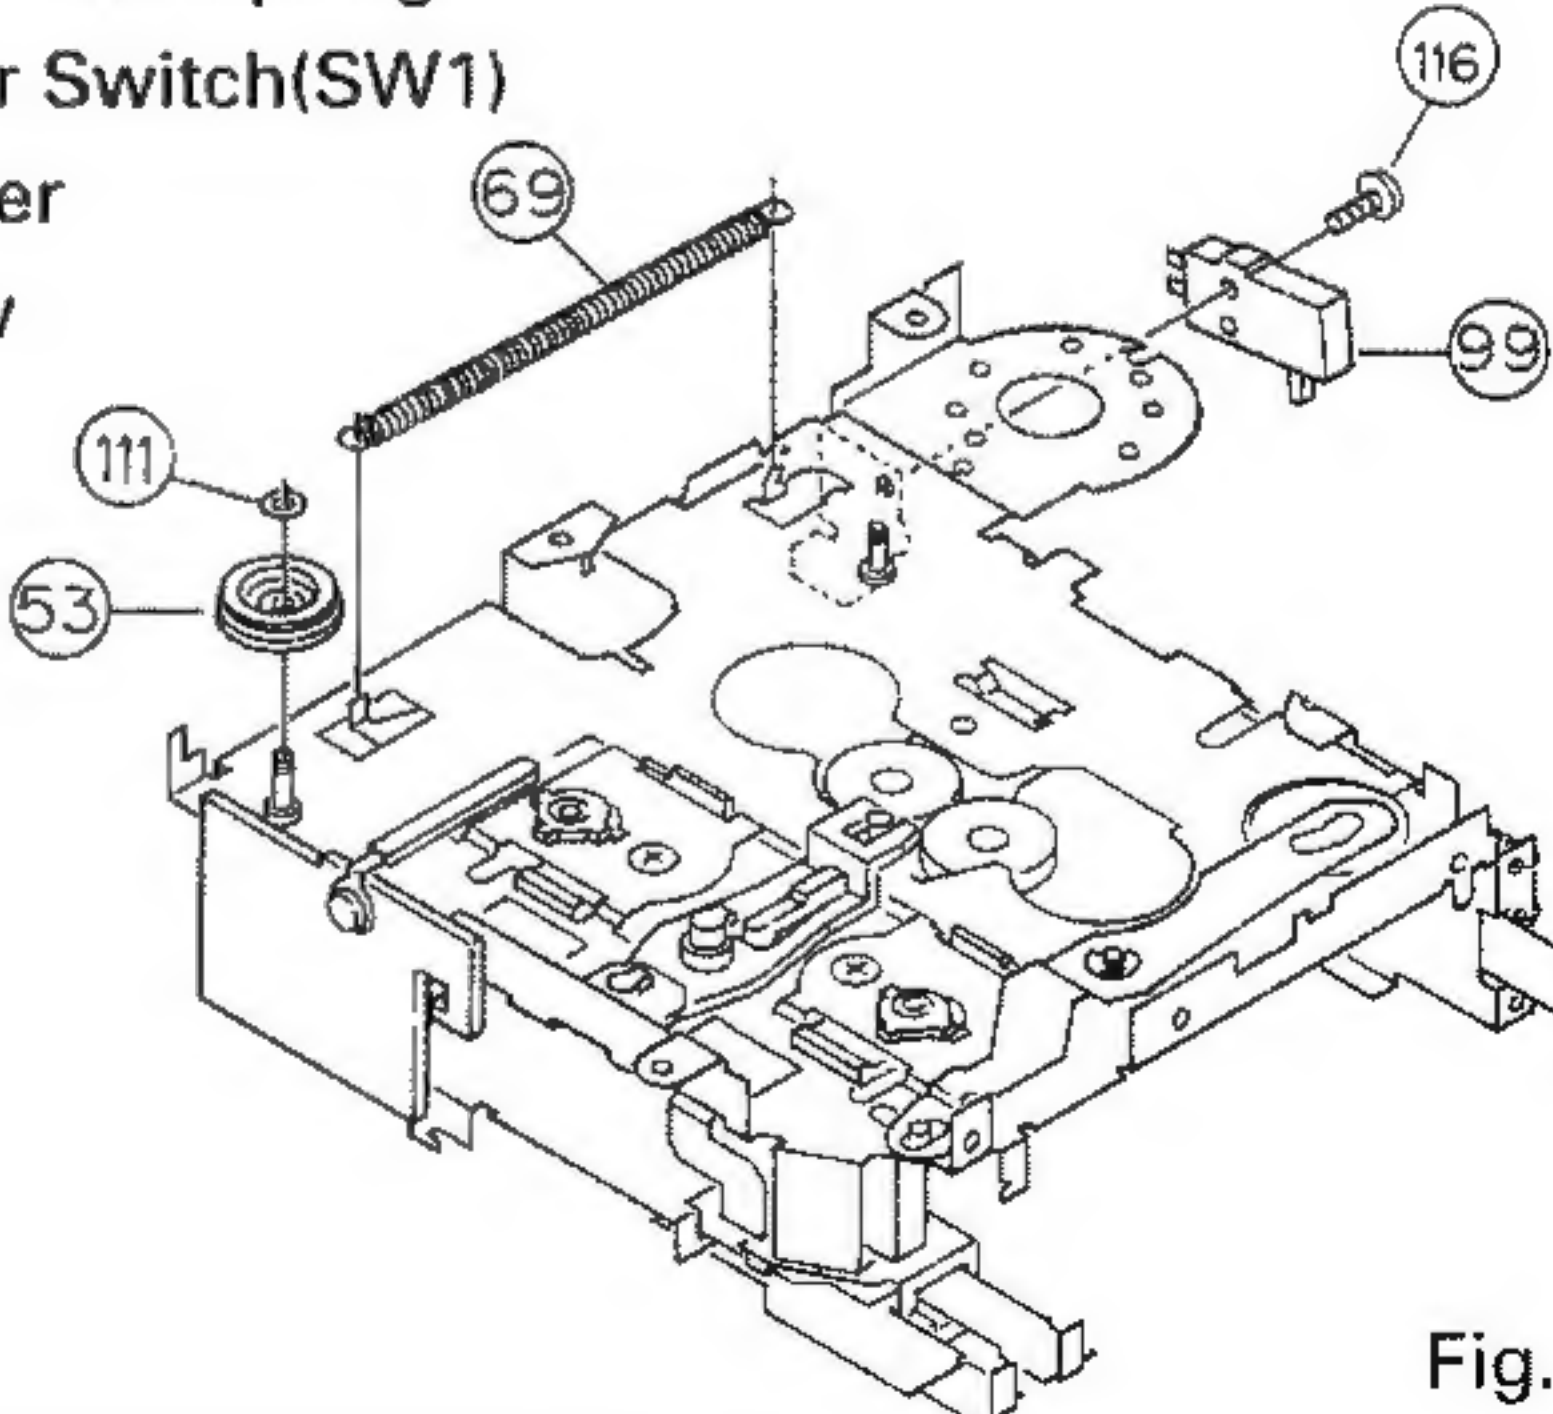

CASSETTE MECHANISM

3. OUTLINE OF ELECTRIC-PART LINKAGE

Fig. 2

## 4. MAIN OPERATIONS

### 4.1 OPERATION OF THE DETECTION MECHANISM

- (1) The Detector Cam Assy ⑤① generates rotational power in the direction B as shown by an arrow in the Fig.3 as the Reel Spindle Assy (D) ①⑤ rotates.
- (2) The Sensor Arm ④③ turns as shown by the arrows C in the Fig. 3, on the fulcrum A by the rotational force of the Detector Cam Assy ⑤①.
- (3) The Detector Gear ④⑧ always rotates. The sensing pin of the Sensor Arm ④③ moves along the outer cam.

Fig. 3

- (4) When the Reel Spindle Assy (D) ①⑤ stops (or tape rewinding is completed), the Detector Cam Assy ⑤① also stops.
- (5) When the Detector Cam Assy ⑤① stops, the Sensor Arm ④③ also stops turning in the direction C (Fig.3), and stands still.
- (6) The sensing pin of the Sensor Arm ④③ is pushed toward the fulcrum of the Detector Gear ④⑧ by the inside cam of the Detector Gear ④⑧. (Fig.4)
- (7) This movement unlocks the Gear Lock Arm ④⑦ from the Selector Gear ④④. The Selector Gear ④④ rushes toward the Detector Gear ④⑧ with the pressure of the Dash Spring ⑦⑦. When the Selector Gear ④④ gets engaged with the Detector Gear ④⑧, the Selector Gear ④④ starts rotating.

## **1. SAFETY INFORMATION**

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-your selfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

### **WARNING!**

Lithium batteries. Danger of explosion. Replacement must be done by qualified personnel and only by following the instructions given in the service manual.

This warning is stated on the product or in the operating instructions. When replacing the lithium batteries, follow the note below.

Dispose of the used battery promptly. Keep away from children. Do not disassemble and do not dispose of in fire.

The battery used in this device may present a fire or chemical hazard if mistreated. Do not recharge, disassemble, heat above 100°C or incinerate. Replace only with the same Part Number. Use of another battery may present a risk of fire or explosion.

Note: The lithium battery installation position is shown in the exploded view and the P.C. board pattern.

### **ADVARSEL!**

Lithiumbatteri — Eksplosionsfare ved fejlagtig håndtering. Udskiftning må kun ske med batteri af samme fabrikat og type. Levér det brugte batteri tilbage til leverandøren.

Denne advarsel er angivet på produktet eller i brugsvejledningen. Ved udskiftning af lithium batterierne følges nedenstående anvisning.

Batterierne må kun udskiftes med batterier af samme type og mærke.

### **VARNING**

Explosionsfara vid felaktigt batteribyte. Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren. Kassera använt batteri enligt fabrikantens instruktion.

Denna varning finns på apparaten eller i bruksanvisningen. Följ nedanstående anvisningar vid byte av litiumbatterier. Batterierna får endast bytas ut mot litiumbatterier av samma typ och fabrikat.

## 7.2 DIAGMNOSIS

### 7.2.1 DISASSEMBLY

#### ● Removing the Case

1. Insert and turn  screwdriver to remove the case.
2. Remove the three screws A.
3. Raise the case to remove.

Fig.20

#### ● Removing the Handle

1. Remove the two screws, and them remove the handle.

Fig.21

#### ● Removing the Grille Assy

1. Remove the two knobs.
2. Press the tabs at four locations indicated by arrows, and then pull out the grille assy.

Fig.22

#### ● Removing the Cassette Mechanism Assy

1. Disconnect the connector.
2. Remove the four screws B.
3. Remove the cassette mechanism assy.

Fig.23

#### ● Removing the Tuner Amp Unit

1. Remove the five screws C.
2. Raise up tuner amp unit to remove it from the chassis Assy.

8. OPERATIONS AND SPECIFICATIONS

Fig.26

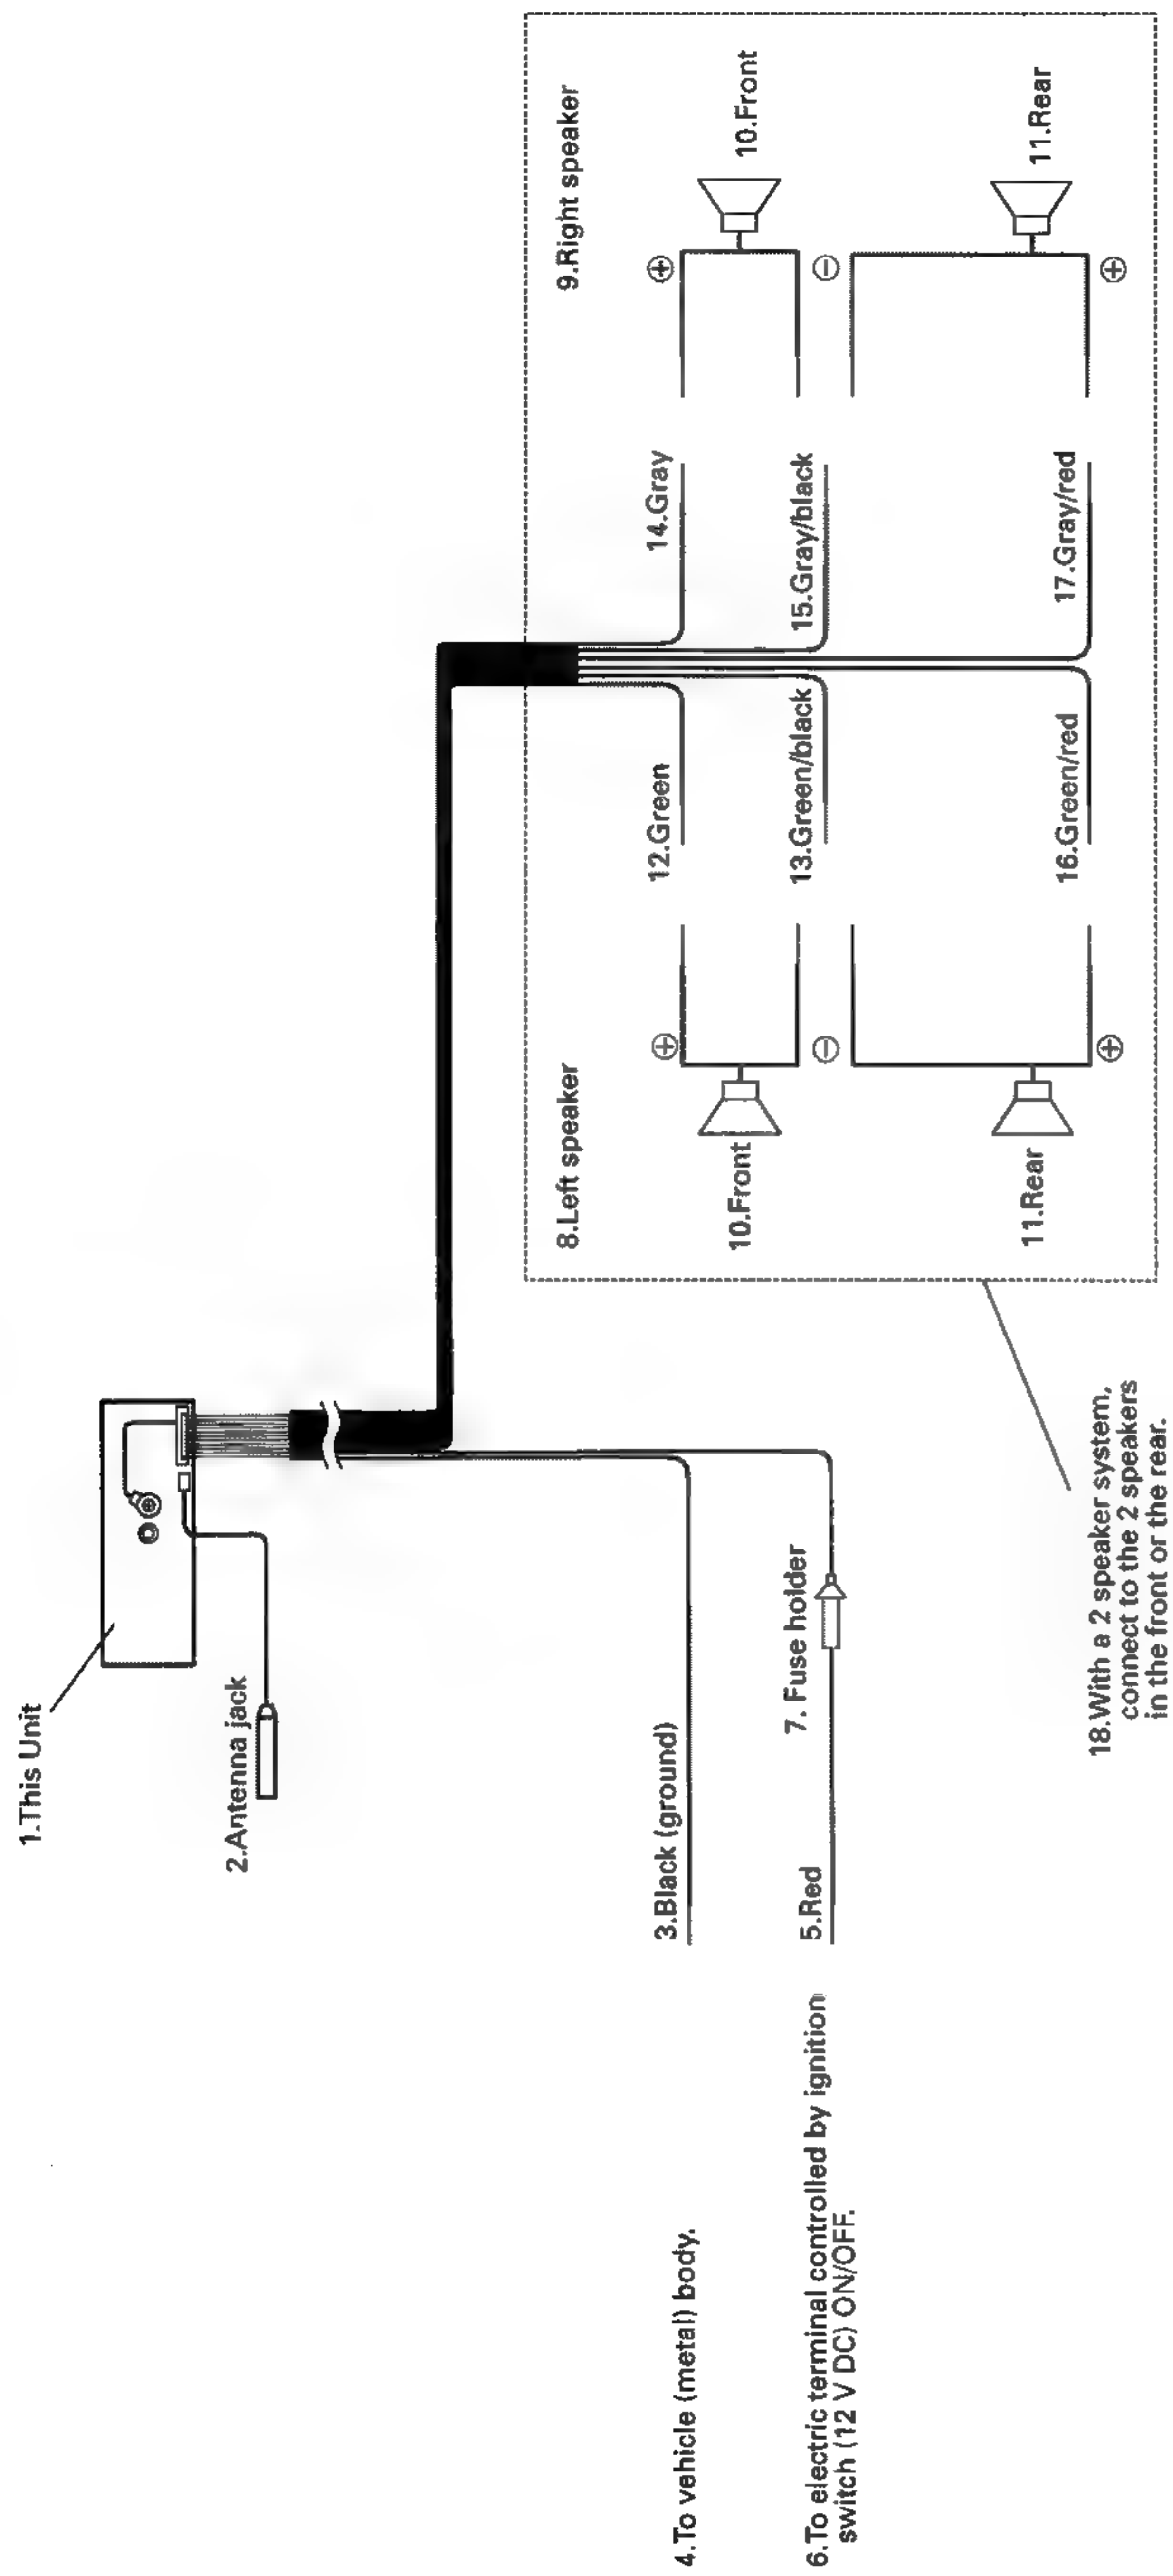

Fig.27

KEH-1010QR

**Tuner Operation**

&lt;ENGLISH&gt;

**Basic Operation of Tuner****Note:**

- If a cassette tape is loaded, eject it.
- The LOUD indicator lights when power is switched ON. (You cannot switch the Loudness function OFF.)

- The FM bands cover different frequency ranges as below;

F I (FM1): 65 - 74 MHz

F II (FM2), F III (FM3): 87.5 - 108 MHz

Fig.28

KEH-1010QR, 1050QR, 1050QRS

KEH-1050QR

**Tuner Operation**

&lt;ENGLISH&gt;

**Basic Operation of Tuner****Note:**

- If a cassette tape is loaded, eject it.
- The LOUD indicator lights when power is switched ON. (You cannot switch the Loudness function OFF.)

Fig.29

## Basic Operation of Tuner

## About the SW tuner

This tuner/cassette player's tuner lets you tune to short wave (SW) stations. With short wave reception, the problem of phasing sometimes occurs. Phasing refers to periodic increases and decreases in volume level when listening to a short wave broadcast from a distant broadcast station. This phenomenon is characteristic of short wave broadcasts; it is not a malfunction of this unit.

## Note:

- If a cassette tape is loaded, eject it.
- The LOUD indicator lights when power is switched ON. (You cannot switch the Loudness function OFF.)

## Basic Operation of Cassette Player

## Note:

- The LOUD indicator lights when power is switched ON. (You cannot switch the Loudness function OFF.)

Changing the AM Tuning Step

<ENGLISH>

The tuning step employed in the tuner's AM band can be switched between 9 kHz and 10 kHz per step. Reset the tuning step from 9 kHz (the factory preset step) to 10 kHz when using the tuner in North, Central or South America.

Specifications	Initial Setting	New Setting
Tuning Steps	9 kHz	10 kHz
Frequency range	531 – 1,602 kHz	530 – 1,710 kHz

1. Set the **POWER** switch to the **OFF** position.
2. While pressing the [◀] or [▶] button, set the **POWER** switch to the **ON** position.

Cassette Player and Care

<ENGLISH>

About the Cassette Player

- A loose or warped label on a cassette tape may interfere with the eject mechanism of the unit or cause the cassette to become jammed in the unit. Avoid using such tapes or remove such labels from the cassette before attempting use.
- Be sure to eject the tape when the vehicle's ignition is turned OFF. Leaving the tape in the unit can deform the pinch roller causing wow and flutter during tape playback.

Cleaning the Head

- If the head becomes dirty, the sound quality will deteriorate and there will be sound dropouts and other imperfections in performance. In this case, the head must be cleaned.

Precaution

- Keep this manual handy as a reference for operating procedures and precautions.
- Always keep the volume low enough for outside sounds to be audible.
- Protect the product from moisture.

- Should this product fail to operate properly, contact your dealer or nearest authorized Pioneer Service Station.

<ENGLISH>

Specifications

<ENGLISH>

General

Power source ..... 14.4 V DC (10.8 – 15.1 V allowable)  
Grounding system ..... Negative type  
Max. current consumption ..... 6.0 A  
Dimensions  
(mounting bracket)  
..... 182 (W) × 52 (H) × 147 (D) mm  
(front face) ..... 188 (W) × 58 (H) × 20 (D) mm  
Weight ..... 1.6 kg

Amplifier

Maximum power output ..... 25 W × 2 / 15 W × 4  
Continuous power output ..... 16 W × 2  
(DIN45324, +B = 14.4 V)  
Load impedance ..... 4 Ω (4 – 8 Ω allowable)  
Tone controls (Hi cut tone) ..... 0 – 16 dB (10 kHz)  
Loudness contour ..... +10 dB (100 Hz) (volume: –30 dB)

Cassette player

Tape ..... Compact cassette tape (C-30 – C-90)  
Tape speed ..... 4.76cm/sec.(+0.14cm/sec.,-0.05cm/sec.)  
Fast forward/rewinding time ..... Approx. 160 sec. for C-60  
Wow & flutter ..... 0.13% (WRMS)  
Frequency response ..... 40 – 14,000 Hz (±3 dB)  
Stereo separation ..... 45 dB  
Signal-to-noise ratio ..... 52 dB (IEC-A network)

FM tuner

Frequency range ..... 65 – 74 MHz  
87.5 – 108 MHz  
Usable sensitivity  
..... 11 dBf (1.0 μV/75 Ω, mono, S/N: 30 dB)  
50 dB quieting sensitivity ..... 17 dBf (1.9 μV/75 Ω, mono)  
Signal-to-noise ratio ..... 67 dB (IEC-A network)  
Distortion ..... 0.9% (at 65 dBf, 1 kHz, stereo)  
Frequency response ..... 30 – 15,000 Hz (±3 dB)  
Stereo separation ..... 34 dB (at 65 dBf, 1 kHz)

MW tuner

Frequency range ..... 531 – 1,602 kHz  
Usable sensitivity ..... 31.6 μV (S/N: 20 dB)  
Selectivity ..... 50 dB (±9 kHz)

LW tuner

Frequency range ..... 153 – 281 kHz  
Usable sensitivity ..... 63.1 μV (S/N: 20 dB)  
Selectivity ..... 50 dB (±9 kHz)

Note:

- Specifications and the design are subject to possible modification without notice due to improvements.

General

Power source ..... 14.4 V DC (10.8 – 15.1 V allowable)  
Grounding system ..... Negative type  
Max. current consumption ..... 6.0 A (KEH-1050QR)  
7.5 A (KEH-1030)

Dimensions

KEH-1050QR  
(mounting bracket)  
(nose) ..... 182 (W) × 52 (H) × 147 (D) mm  
188 (W) × 58 (H) × 20 (D) mm

KEH-1030

(DIN) (chassis) ..... 178 (W) × 50 (H) × 140 (D) mm  
(nose) ..... 188 (W) × 58 (H) × 20 (D) mm  
(D) (chassis) ..... 178 (W) × 50 (H) × 145 (D) mm  
(nose) ..... 170 (W) × 46 (H) × 15 (D) mm  
Weight ..... 1.6 kg (KEH-1050QR)  
1.2 kg (KEH-1030)

Amplifier

Continuous power output is 16 W per channel min. into 4 ohms, both channels driven 50 to 15,000 Hz with no more than 5% THD.

Maximum power output ..... 25 W × 2 / 15 W × 4  
Load impedance ..... 4 Ω (4 – 8 Ω allowable)  
Tone controls (Hi cut tone) ..... 0 – 16 dB (10 kHz)  
Loudness contour ..... +10 dB (100 Hz)(volume: –30 dB)

Cassette player

Tape ..... Compact cassette tape (C-30 – C-90)  
Tape speed ..... 4.76cm/sec.(+0.14cm/sec., -0.05cm/sec.)  
Fast forward/rewinding time ..... Approx. 160 sec. for C-60  
Wow & flutter ..... 0.13% (WRMS)  
Frequency response ..... 40 – 14,000 Hz (±3 dB)  
Stereo separation ..... 45 dB  
Signal-to-noise ratio ..... 52 dB (IEC-A network)

Note:

- Specifications and the design are subject to possible modification without notice due to improvements.

General

Power source ..... 14.4 V DC (10.8 – 15.1 V allowable)  
Grounding system ..... Negative type  
Max. current consumption ..... 6.0 A (KEH-1050QRS)  
7.5 A (KEH-1030SW)

Dimensions

KEH-1050QRS  
(mounting bracket)  
(nose) ..... 182 (W) × 52 (H) × 147 (D) mm  
188 (W) × 58 (H) × 20 (D) mm

KEH-1030SW

(DIN) (chassis) ..... 178 (W) × 50 (H) × 140 (D) mm  
(nose) ..... 188 (W) × 58 (H) × 20 (D) mm  
(D) (chassis) ..... 178 (W) × 50 (H) × 145 (D) mm  
(nose) ..... 170 (W) × 46 (H) × 15 (D) mm  
Weight ..... 1.6 kg (KEH-1050QRS)  
1.2 kg (KEH-1030SW)

Amplifier

Continuous power output is 16 W per channel min. into 4 ohms, both channels driven 50 to 15,000 Hz with no more than 5% THD.

Maximum power output ..... 25 W × 2 / 15 W × 4
